SLUSHY MACHINE OPERATING INSTRUCTIONS

1. Plug unit directly into power source. It is not recommended to use extension cords.
 - a. Keep unit in shade for best results.
 - b. Start 1-3 hours before your guests arrive: It may take up to 3 hours to freeze depending on outside temperature.
2. Fill the barrels to the minimum with Water first and try on agitators to see if there are any leaks before adding any concentrate. Sometimes the rubber seals come off during transport and moving around.
If there is a leak – empty and remove barrel. Vaseline the red seals, reinstall seals tightly, reinstall barrel tightly and test with water again.
3. Once sealed, fill the 5 Gallon MIXING JUGS with the 4 Gallons of COLD WATER and 1 Gallon of the Flavored Concentrate. Pour 3-Gallons of the mix, maximum, into each barrel. Do not overfill the barrels.

NOTE: When ready, slush occupies more volume than the liquid.

NOTE: DO NOT add alcohol directly in the bowl (alcohol does not freeze).

4. Switch the power and rotators to the ON position.
 - * For Frozen Drinks, place the switches in the SNOW-FLAKE position.
 - * For Liquid Drinks, place the switches in the DROPS position
5. DO NOT let Slush get below minimum level – keep refilling & enjoy!
6. Please clean out machine completely with water and return all clean pins, rods and jugs.
 - We cannot accept any open or non-opened concentrates back.
 - Keep for the next time ☺
